RESEARCH REPORTING SERIES

Research reports of the Office of Research and Monitoring, Environmental Protection Agency, have been grouped into five series. These five broad categories were established to facilitate further development and application of environmental technology. Elimination of traditional grouping was consciously planned to foster technology transfer and a maximum interface in related fields. The five series are:

1. Environmental Health Effects Research
2. Environmental Protection Technology
3. Ecological Research
4. Environmental Monitoring
5. Socioeconomic Environmental Studies

This report has been assigned to the ENVIRONMENTAL PROTECTION TECHNOLOGY series. This series describes research performed to develop and demonstrate instrumentation, equipment and methodology to repair or prevent environmental degradation from point and non-point sources of pollution. This work provides the new or improved technology required for the control and treatment of pollution sources to meet environmental quality standards.

ABSTRACT

Livestock waste management research literature has expanded rapidly during the past ten years. Results of this work have been published as journal articles, conference proceedings, government publications, books, magazine articles and research theses. Publication of this bibliography makes these sources of information available to the researcher, designer, regulatory official and others interested in the latest developments in animal waste handling, treatment, disposal or reuse.

Included in the bibliography are references which include title, author, keywords and source data for 241 journal papers, 425 papers published as conference proceedings, 114 university or government publications, 71 magazine articles, 26 books or book chapters, 15 unpublished papers, and 53 academic theses. Any one of these items may be identified and the reference located by knowing the author's name, title of the article, or by checking the subject matter listing.

In addition to this bibliography, abstracts of the technical articles were provided to the Office of Research and Monitoring, Robert S. Kerr Environmental Research Laboratory, U.S. Environmental Protection Agency, Ada, Oklahoma and to the Water Resources Scientific Information Center, U.S. Department of the Interior. Abstracts were published in Selected Water Resources Abstracts beginning January 1, 1971.

This report was submitted in fulfillment of Project Number 13040 FUU, under the partial sponsorship of the Environmental Protection Agency.

SECTION I

INTRODUCTION

Research activity in the area of livestock waste management has increased sufficiently to make necessary a means of quickly locating pertinent material and having assurance the search is complete. This project produced abstracts of this material in an easily retrievable form. Included in this bibliography are references which include title, author, keywords and source data for 241 journal papers, 425 papers published as conference proceedings, 114 university or government publications, 71 magazine articles, 26 books or book chapters, 15 unpublished papers, and 53 academic theses. Any one of these items may be identified and the reference located by knowing the author's name, title of the article, or by checking the keyword index.

The objective of this project was to compile a current abstract series for literature relating to animal waste disposal and pollution control. Copies of the abstracts and of the papers abstracted were sent to the Environmental Protection Agency in Ada, Oklahoma and to the Water Resources Scientific Information Center in Washington for publication in "Selected Water Resources Abstracts."

Literature abstracted included those papers, reports, articles, theses, and books concerned with the technology of animal wastes. Specific sources of wastes of concern were those from beef cattle, swine, poultry, dairy cattle, sheep, and from other animals of economic importance, whether being raised in roofed or unroofed systems. Areas of interest were water pollution or odors resulting from animal wastes, characteristics, storage, transport, treatment, utilization and disposal of animal manures. Not included were articles dealing with wastes arising from the processing of animals after slaughter or animal products such as packing house, dairy, rendering plant or cheese plant wastes.

Major effort and responsibility for information retrieval was devoted to materials published in technical journals and in published proceedings of conferences sponsored by major professional organizations. Other items: unpublished papers, speeches, theses, semi-technical articles and government publications were included as their availability was discovered.

Procedure for Selecting Input Items

Items were selected for inclusion by several techniques:

1. Manual surveillance of journals commonly publishing papers on animal waste management. This was accomplished by reviewing photocopies of the tables of contents, provided by the Iowa State University Library, Reference Department.
2. Utilization of a computerized literature search system (Anderson, no date) which electronically scanned over 2,300 scientific publications. Each article whose title contained a word previously selected as being of interest caused a notification to be generated including title, author, and source record. Copies of those articles indicated to be relevant were ordered for final evaluation and abstracting.
3. Animal waste researchers and other people interested in the project including the project officer, representing the National Animal Feedlot Waste Research Program, Robert S. Kerr Environmental Research Laboratory, Environmental Protection Agency, provided articles and references which might have otherwise been missed.
4. Transactions of relevant conferences were purchased or obtained on loan for manual evaluation of pertinent papers.

Abstracting

Abstracts of the items selected for inclusion were prepared by a person sufficiently familiar with the field to prepare accurate material. These abstracts met the requirements of the Water Resources Scientific Information Center. Abstracts were forwarded to WRSIC for publication, and to the EPA in Ada, Oklahoma.

Bibliography

This bibliography was produced by preparation of a card deck and utilizing a program (KWOC Index) developed by John R. Jordan (1970) and processed on the Iowa State University computer facility. The KWOC Index is composed of three COBOL programs utilizing input cards punched in the IBM KWIC INDEX format. The bibliography deck was updated and the program run at frequent intervals to provide a means of rapid abstract retrieval and as a tool to prevent abstracting of an item more than once.

SECTION II

USER'S GUIDE

Each entry in this bibliography has been assigned a unique Cross Reference Code of nine digits (example: 100 67 0120). The first number identifies the class of the document:

Code	Class
100	Technical journal paper
200	Conference proceeding paper
300	University or government publication
400	Magazine article
500	Book or chapter from a book
600	Unpublished paper
700	Thesis

The next number is the year of publication or presentation. The last number is a four-digit sequence number to identify each article. For example, 100 67 0120 is the Cross Reference Code for a technical journal paper published in 1967.

This publication has three sections: Bibliography, Author Index, and Keyword Index. An explanation of each section follows.

Bibliography

The Bibliography section (pages 1-46) lists the items by class as defined above. Articles within each class are arranged first by year of publication, then by sequence number.

Each entry in the Bibliography includes: the Cross Reference Code (class, year, and sequence number), the Authors, the Title, a list of Keywords not included in the Title, and the bibliographical citation.

Author Index

The Author Index (pages 47-52) lists, alphabetically, all the authors cited in the Bibliography. To the right of each author is the Cross Reference Code of each article with which he is associated.

Keyword Index

The Keyword Index (pages 53-132) lists alphabetically all significant words in the title and the articles. Associated with each keyword are two elements of information. To the right of the Keyword are the first 100 characters of the title of the article. To the left is the Cross Reference Code of the article, providing the key for access to the Bibliography.

ACKNOWLEDGEMENTS

The preparation and typing of the large number of abstracts and computer cards was an exacting task. The devotion and careful work of the following people is gratefully acknowledged: Lee White, Debra Self Parker, Carol Hansen, Lyle Schmidt, Brent Parker, Mary Hazen and Becky Nerness.

The efforts of John R. Jordan, Systems Analyst, ISU Computation Center were instrumental in making the necessary program changes to produce the bibliography. The publication of the bibliography during the summers of 1971 and 1972 was the result of extra services on the part of John H. Pedersen, Manager, Midwest Plan Service, Ames, Iowa. Thamon E. Hazen provided leadership during the final months of the project. Warren Kuehn, Director of Libraries, and his staff were especially cooperative and provided extra services which were instrumental in the success of the overall effort.

The support of the project by the Office of Research and Monitoring, National Animal Feedlot Wastes Research Program, Robert S. Kerr Environmental Research Laboratory, Environmental Protection Agency, and the help provided by R. Douglas Kreis, Project Officer, is acknowledged with sincere thanks.
